

Agents you can actually **trust** in production.

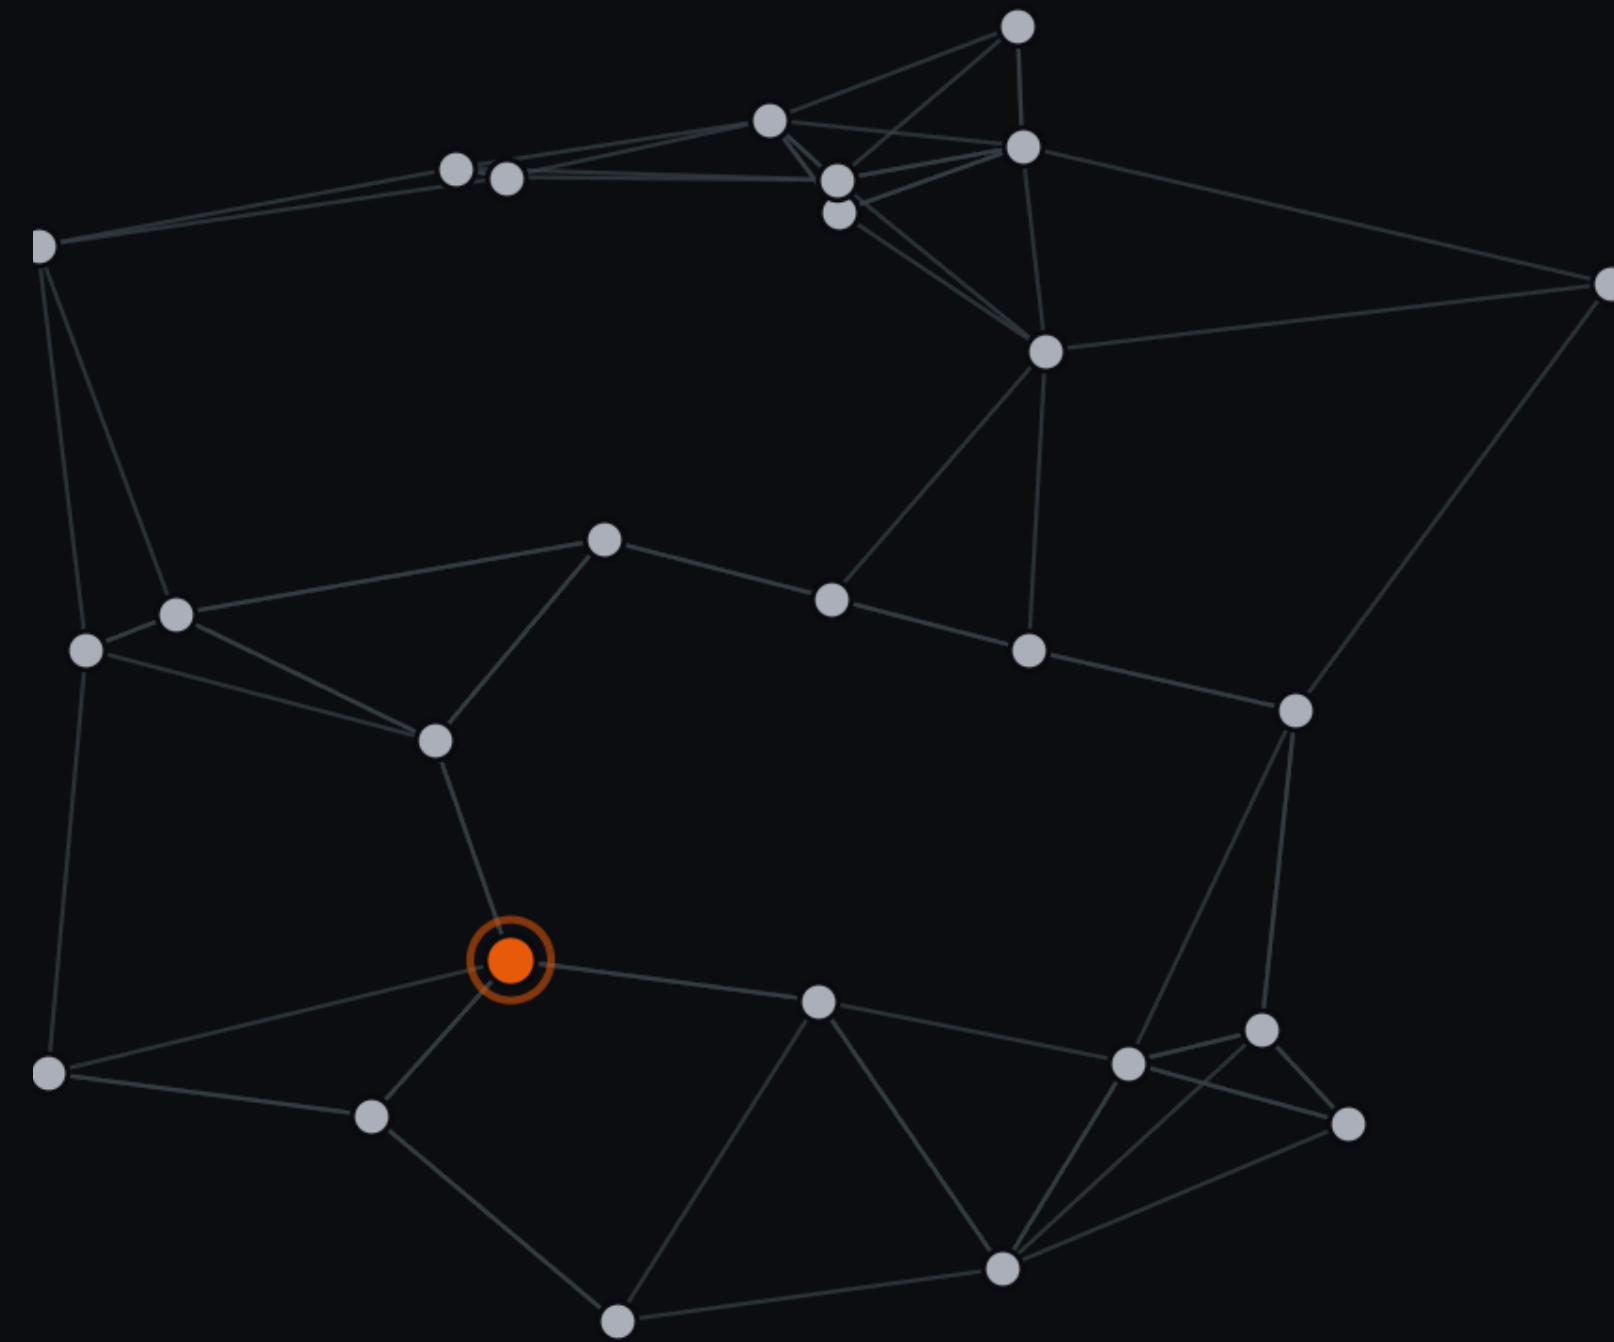

Xplore builds the platform that lets enterprises **evaluate, train, deploy, and control** production AI agents - so they can finally be used where mistakes are not allowed.

FORGE

Full-lifecycle training & control platform.

AGENT 007

Public, real-world agent benchmarks.

The agent invents one node that was never there — hidden among thousands, it breaks the whole result.

The costliest errors happen in **regulated work** - where agents still can't go.

AGENTIC-AI MARKET BY 2030

\$47B Most of the value is in regulated, high-stakes work.

THE ONE PROBLEM

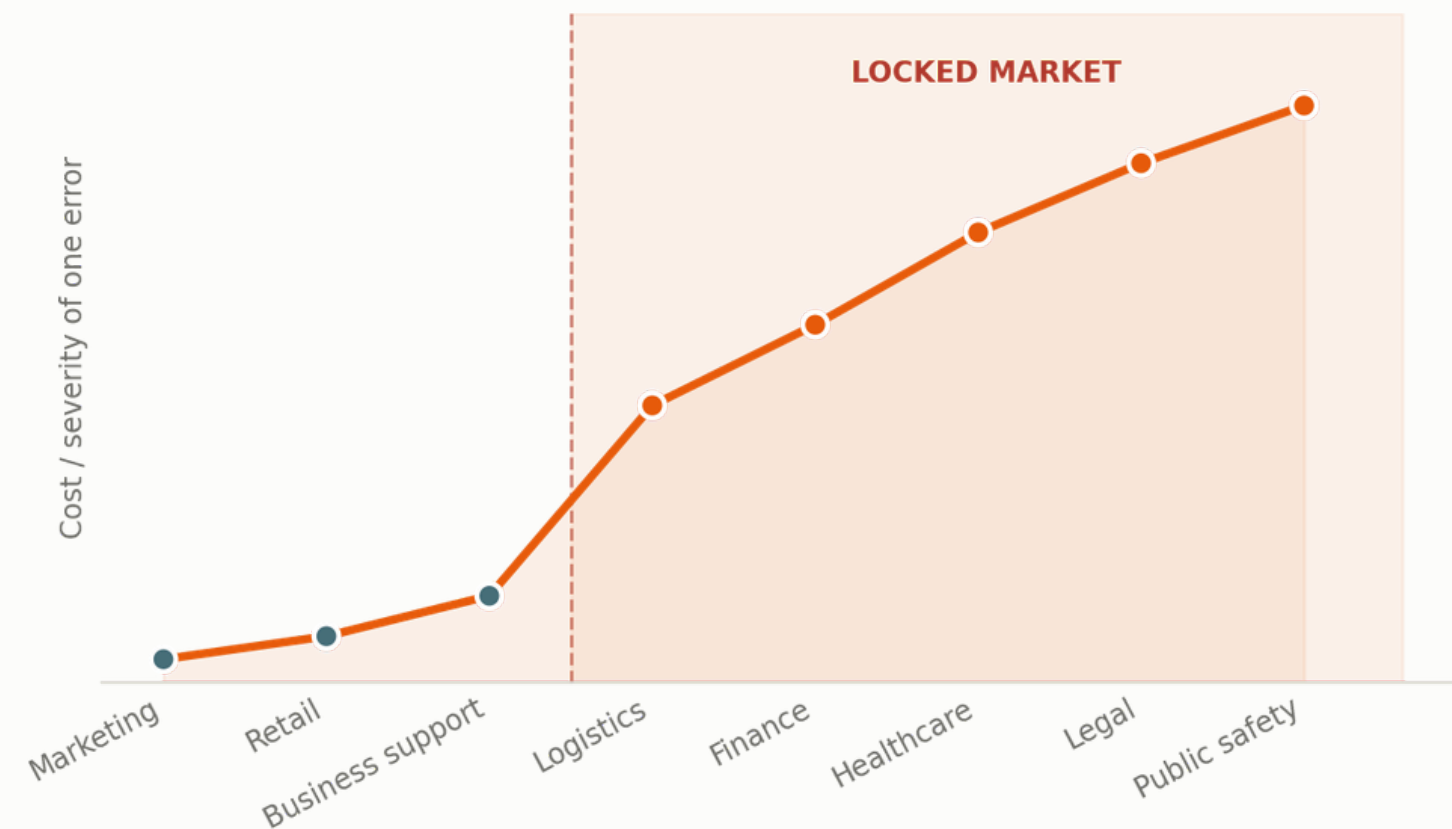

The black box.

Agents hallucinate and ignore instructions - and the error is untraceable.

If you can't see it, you can't fix it, and you can't trust it.

COST OF A SINGLE AGENT ERROR, BY INDUSTRY →

Source: 70+ interviews conducted by Xplore

Train the errors out - measured, not promised.

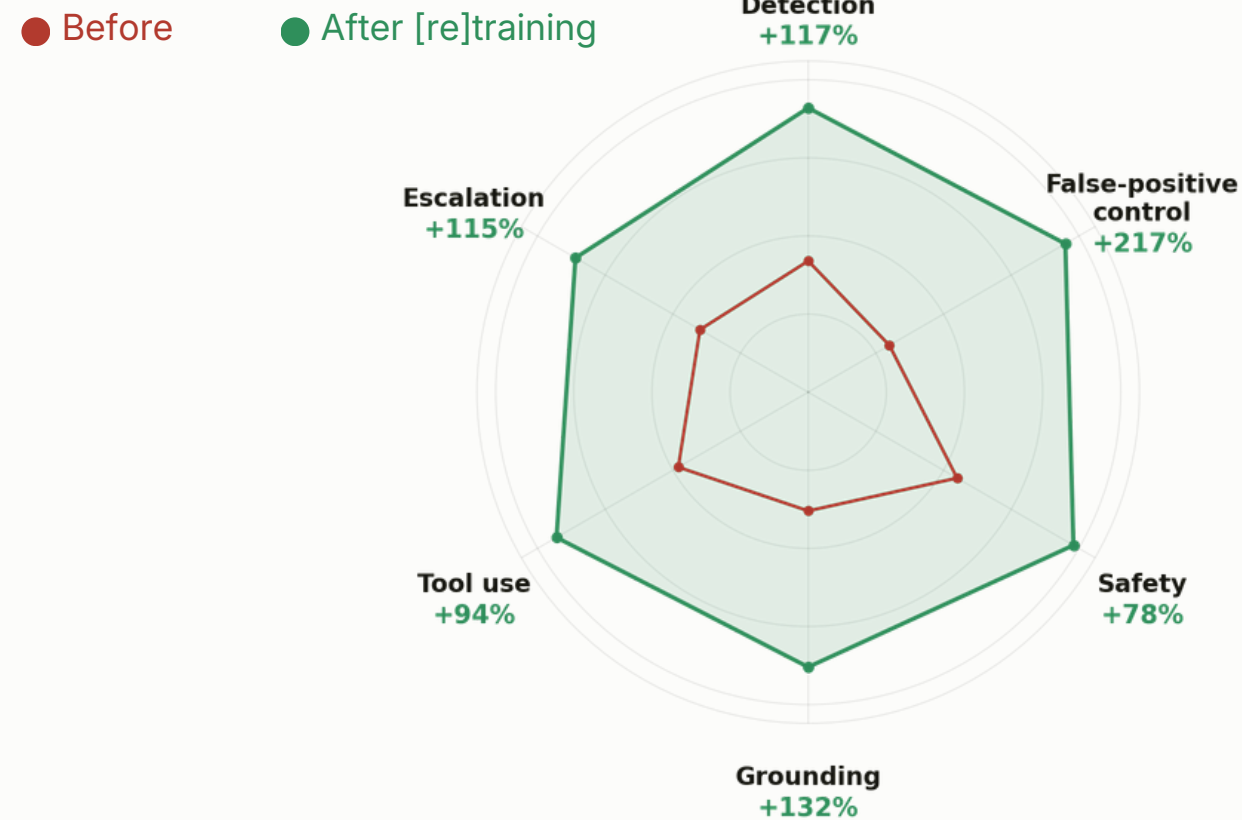

Our data protocol makes every step the agent takes visible — so errors become measurable, traceable, and trainable.

01 Protocol
Every reasoning step & action, made visible.

02 Train
Find the errors, fix them, re-measure.

03 Control
Stays reliable in prod, after model change.

AGENT EVALUATION

A client built a **wellbeing-risk ECG agent** on Forge and shipped it inside their product in just a **few weeks**.

- ERRORS CAUGHT: **40+**
- LOSSES AVOIDED: **£2M+** in 2.5m
